II-TIF or II-21 molecules are implicated in activation of STAT transcription factors, acute phase proteins and inflammation. The present sequence is mouse TIF alpha genomic DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                      Stimulating expression of STAT transcription factor and inducing production of acute phase protein in a cell, involves contacting capable of expressing STAT with T cell derived inducible factors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             27-JUL-2000;

                                                                                       The present invention relates to an isolated nucleic acid molecule, which encodes a T cell derived inducible factor comprising an amino acid sequence encoded by 6 defined nucleotide sequences. The nucleic acid molecules are shown to be up regulated by the cytokine interleukin-9 (II-9) and are described as T Cell Derived Inducible Factors (TIFs). The invention is used in protein therapy. The nucleic acid molecules encode proteins which induce STAT activation in cells. They can be used, for example, in the stimulation of regeneration of targetted tissues. Further, their inhibitors or antagonists can be used to retard, prevent or inhibit differentiation of other tissues. The present sequence is
                                                                                                                                                                                                                                                                                                                                  Nucleic acids encoding T cell derived inducible factors inducing STAT activation in cells - \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Mouse T cell derived inducible factor (TIF) alpha genomic

                                                                                        S
                                                                                                                                                                                                                                                                                         This DNA encodes T cell derived inducible factor (TIF) beta identified by subtraction cloning from a murine lymphoma cell line BW5147 in the presence or absence of interleukin 9 (IL-9). As compared to the coding region for TIF-alpha (see AAA28816), that of TIF-beta has six silent caid changes. There are two changes which result in an inconsequential amino acid change (at both of positions 36 and 103, Val in TIF-alpha becomes Ile in TIF-beta). There is also a more significant change at position activation of STAT transcription factors. The novel TIFs were expressed in the presence of IL-9, but not in its absence. TIFs induce STAT cactivation in cells. They can be used, e.g. in the stimulation of crearing the constant of targeted tissues. Their inhibitors or antagonists can be used to retard, prevent or inhibit differentiation of other tissues. The cuseful in the treatment of asthma, altergies and lymphoma (claimed). They are also useful for identifying compounds that inhibit or activate T cell induced factor activity in a

                                                                                                                                                                                                                                                                                                                                                                                                                              Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                    Score
